CONCLUSION	168

1. INTRODUCTION

The **Public Procurement and Disposal of Public Assets (PPDPA) Act [Chapter 22:23]** was enacted to provide a legal framework that promotes **transparency, efficiency, effectiveness, economy, value for money, competition, and accountability** in public procurement and disposal processes. The Act seeks to regulate and control procurement practices to ensure that all transactions are conducted in a manner that upholds **integrity, fairness, and public confidence** in the procurement system.

In terms of **section 6 of the PPDPA Act**, the **Procurement Regulatory Authority of Zimbabwe (PRAZ)** is mandated to develop and maintain **tools, guidelines, and electronic databases** to support all Procuring Entities in executing their procurement functions. This includes providing structured pricing references, standardized procurement methodologies, and other resources such as the **National Standard Price List (NSPL)**, which are intended to enhance **efficiency, consistency, and evidence-based decision-making** across all levels of public procurement. Through these measures, the Authority (**PRAZ**) ensures that Procuring Entities (PEs) operate within a **regulated and transparent environment**, while promoting **value for money and equitable access** to procurement opportunities.

The National Standard Price List (NSPL) provides a structured and standardised pricing reference for goods and services procured by Public Entities (PEs) in Zimbabwe. It enhances compliance with the Public Procurement and Disposal of Public Assets Act [Chapter 22:23] and strengthens national procurement governance systems. By offering reliable benchmark prices, the NSPL supports value for money, transparency, accountability, and consistency across all stages of the public procurement cycle.

The NSPL was developed through a coordinated and whole-of-Government approach involving the Ministry of Finance, Economic Development and Investment Promotion (MoFEDIP), the National Competitiveness Commission (NCC), the Office of the President and Cabinet (OPC), and the Zimbabwe National Statistics Agency (ZIMSTAT). This inter-institutional collaboration ensured fiscal alignment, policy coherence, competitiveness considerations, and statistical integrity in the formulation of the national pricing benchmarks.

The NSPL assists PEs in developing realistic budgets, undertaking credible market price analyses, and evaluating bids in an objective and defensible manner. It mitigates risks associated with inflated quotations, speculative pricing, and market distortions. While the NSPL provides nationally validated reference median prices, it does not substitute mandatory market surveys; rather, it complements them by establishing a consistent national baseline for price comparison.

The NSPL is a metric that represents price position relative to competitors across key categories and brands, suppliers of goods, works, and services. The MPI is a key component in the tender pricing strategy, which looks at prices of commonly procured items, specification units of purchase, neutral specification of items or brand names, that are standardized items and procured by procuring entities in different categories described herein.

The frequency of production and release of the MPI is on a quarterly basis; intended to be made available to all stakeholders involved in the public procurement process and supply chain. This is

necessary in order for the stakeholders to make informed decisions during their respective tendering and supply processes.

2. METHODOLOGY

The **National Standard Price List (NSPL)** was initially developed using price data predominantly submitted from suppliers operating within **Harare Province**. Going forward, the NSPL will be **expanded to include comprehensive price information from all provinces across Zimbabwe**, ensuring nationwide representation.

The NSPL was developed using a **rigorous research methodology** grounded in **data accuracy, market representativeness, transparency, and alignment with procurement regulatory requirements**. Data collection covered a wide spectrum of supplier markets across Zimbabwe, capturing urban, peri-urban, and rural economies, as well as both **public- and private-sector supply environments**.

This methodology ensures that the resulting prices are **evidence-based, statistically robust, and reflective of prevailing market conditions**, while remaining responsive to fiscal and macroeconomic dynamics. The approach is fully aligned with the objectives of the **Public Procurement and Disposal of Public Assets Act [Chapter 22:23] (PPDPA)**, promoting **fairness, value for money, and integrity in public procurement**.

2.1 Data Analysis

Data analysis involved a systematic review of supplier catalogues, historical public procurement transaction records, and direct market price observations. Prices were collected from retail outlets, wholesalers, industrial suppliers, and service providers across multiple provinces and districts.

ZIMSTAT played a central technical role in leading the collection, collation, validation, and statistical analysis of all price data. Using established national statistical standards and methodologies, ZIMSTAT analysed price distributions, assessed regional and sectoral price movements, and identified pricing anomalies. Extreme outliers were subjected to statistical scrutiny and excluded or moderated where justified, ensuring that reference prices reflect normal market behaviour rather than distortive extremes.

The analysis further accounted for regional price differentials, seasonal demand fluctuations, supply chain constraints, and macroeconomic influences. Median values and weighted averages were applied to enhance accuracy, stability, and comparability of prices across categories.

2.2 Product and Service Classification

All goods and services included in the NSPL are classified in accordance with the Zimbabwe Public Procurement Commodity Coding System. This standardised classification framework promotes uniformity in procurement documentation, facilitates efficient price comparison, and enhances consistency in reporting and analysis across all Public Entities.

The primary classification categories include, but are not limited to: -

- Information and Communication Technology (ICT) equipment and accessories
- Office stationery and consumables
- Construction materials and hardware

- Motor vehicle spares, tyres, and accessories
- Fuel, lubricants, and energy-related products
- Protective clothing and personal protective equipment
- Outsourced services including security, cleaning, maintenance, and facilities management

This structured categorisation strengthens procurement planning accuracy and supports harmonised application of the NSPL across sectors.

2.3 Currency Basis of the NSPL

Zimbabwe operates under a multi-currency regime. In line with prevailing market practices, the NSPL adopts the United States Dollar (USD) as its sole and base currency for price determination and presentation. This approach enhances price stability, transparency, and comparability, particularly in markets characterised by import dependence and foreign currency-denominated transactions.

The exclusive use of USD provides Procuring Entities with a uniform reference framework for budgeting, planning, and procurement decision-making, while reducing pricing distortions arising from currency conversion variability.

Prices are reviewed and updated on a quarterly basis. However, interim revisions may be effected in response to exceptional economic shocks, inflationary pressures, supply chain disruptions, or other significant market developments.

2.4 Limitations of the NSPL

While the NSPL is a critical procurement support instrument, it is subject to certain limitations. Zimbabwe's pricing environment remains dynamic and may be affected by inflation, demand and supply imbalances, global commodity price movements, and logistical constraints. As a result, prices may vary significantly over short periods.

Additional limitations include supplier-specific pricing strategies, quality and specification differences, temporary promotional pricing, and geographic disparities, particularly between metropolitan areas and remote districts. Accordingly, the NSPL should be applied as a guiding benchmark rather than a fixed pricing catalogue. PEs remain responsible for conducting transaction-specific and up-to-date market surveys, especially for high-value, specialised, or sensitive procurements.

3. APPLICATION OF THE NATIONAL STANDARD PRICE LIST

The NSPL supports multiple stages of the public procurement cycle. During procurement planning, it assists PEs in preparing realistic cost estimates and credible budgets. During market analysis, it enhances price assessments by providing a nationally validated benchmark.

During bid evaluation, the NSPL supports Evaluation Committees in identifying abnormally high or low bids and in assessing price reasonableness in a transparent and defensible manner. The NSPL is particularly valuable in sectors vulnerable to price inflation or speculative pricing practices.

The NSPL does not override competitive bidding outcomes, nor does it impose fixed prices. It is intended to support informed decision-making while preserving competition, supplier diversity, and value for money.

Procuring Entities are required to refer to the provincial average prices as reflected in the National Standard Price List (NSPL) applicable to their respective provinces. Where prices for specific goods, works, or services are not provided for within a particular province, national average prices contained in the NSPL may be applied, subject to adequate justification.

In accordance with the principles of economy, efficiency and value for money enshrined in the Public Procurement and Disposal of Public Assets (PPDPA) Act [Chapter 22:23], Procuring Entities shall ensure that the prices for goods, works or services to be procured fall within a permissible variance of plus or minus ten percent ($\pm 10\%$) of the applicable NSPL reference prices.

The NSPL shall be used as a guiding reference during the following stages of the procurement cycle:

- budgeting and resource allocation;
- Annual Procurement Planning; and
- bid or tender evaluation, including price reasonableness assessment.

Brand names appearing in the NSPL are cited solely for indicative and informational purposes, reflecting commonly procured goods and services within the public sector. Such references shall not be construed as a recommendation, endorsement, or mandatory specification by the Authority, nor shall they restrict competition or substitute functional or performance-based specifications, in line with the PPDPA and applicable procurement regulations.

Where a required item is not covered in the applicable quarterly NSPL, Procuring Entities shall undertake a price reasonableness analysis, supported by market evidence and subject to the approval or concurrence of the Authority, as prescribed under the PPDPA Act and prevailing procurement guidelines.

Procuring Entities are further reminded of the provisions of **section 4(1) and (2) of the Public Procurement and Disposal of Public Assets (PPDPA) Act [Chapter 22:23]**, which mandates all procurement officials to ensure the achievement of public procurement objectives, as set out below:

- (1) (a) To ensure that procurement is conducted in a manner that is **transparent, fair, honest, cost-effective, and competitive**;
(b) To **promote competition** among bidders;
(c) To ensure the **fair and equitable treatment of all bidders**, resulting in procurement contracts that represent **value for money**;
(d) To promote the **integrity, fairness, and public confidence** in procurement processes;
and
(e) To facilitate the implementation of any **environmental, social, economic, or other policy considerations** authorised or required by law to be taken into account in procurement proceedings
- (2) The Authority, all Procuring Entities, and all other persons involved in the implementation of this Act shall exercise their functions in a manner that gives **full effect** to the objectives set out in subsection (1).

In that regard, Accounting Officers shall therefore be held accountable for ensuring strict adherence to prescribed price benchmarks.

The Authority shall periodically review, update, and expand the NSPL to ensure that goods, works, and services commonly procured by Procuring Entities are adequately covered in subsequent editions, considering prevailing market conditions and procurement trends.

4. SURVEY RESULTS

Survey results summarise the price patterns observed across sampled suppliers. These results include median prices, price ranges, and sector-specific trends for all categories covered in the NSPL. The findings reflect the influence of macroeconomic conditions, supply chain dynamics, and regional availability.

The full NSPL publication contains detailed price tables for each category, presenting supplier averages, minimum and maximum observed prices, and assessments of price stability. These outputs enable Procuring Entities to make evidence-based procurement decisions aligned with national procurement standards and fiscal discipline.

Notes

The models/brands covered may serve as an indication of other equivalent similar motor vehicle models/brands.

The dash (-) wherever it appears in the table in place of the real price means the price is missing due to one of the following reasons:

1. The number of quotations collected was less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/ outlets were not accessible at the time of data collection
4. Item specifications were not found at the time of data collection
5. Outlets not responded during the data collection period (Stock taking during the time of survey)
6. Products could only be priced upon specific orders/requests
7. Products imported upon request

Notes

Prices of some of the ICT equipment vary based on the brand name, marketing strategies, and the generational release (version date) of the item. The dash (-) wherever it appears in the table in place of the real price means the price is missing due to one of the following reasons:

1. Number of quotations collected was less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection
4. Item specifications were not found at the time of data collection
5. Outlets not responded during the data collection period (Stock taking during the time of survey)
6. Products could only be priced upon specific orders/requests
7. Products imported upon request.

Notes

The dash (-) wherever it appears in the table in place of the real price means the price is missing due to one of the following reasons:

1. Number of quotations collected was less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection
4. Item specifications were not found at the time of data collection
5. Outlets not responded during the data collection period (Stock taking during the time of survey)

6. Products could only be priced upon specific orders/requests
7. Products imported upon request
8. Some outlets were found to be individuals without offices or structures, especially in some division 3 products

Division 4: Corporate and Protective Wear

CONCLUSION

The National Standard Price List (NSPL) represents a critical instrument for strengthening the integrity, efficiency, and accountability of public procurement in Zimbabwe. Its development and implementation are firmly aligned with the objectives and principles of the Public Procurement and Disposal of Public Assets (PPDPA) Act [Chapter 22:23], particularly the promotion of transparency, value for money, fairness, competition, and prudent use of public resources. By providing a structured and standardised pricing reference for commonly procured goods, works, and services, the NSPL addresses long-standing challenges associated with price variability, overpricing, and inconsistent procurement practices across Procuring Entities.

The NSPL is intended to serve as a credible benchmark to guide procurement planning, cost estimation, bid evaluation, contract management, and audit processes. It enhances predictability and consistency in public expenditure, while supporting Accounting Officers, Procurement Management Units, and Evaluation Committees in making objective and defensible procurement decisions. In this regard, the NSPL does not replace competitive procurement processes, but rather complements them by providing an informed reference point against which market prices and bid submissions can be assessed.

Successful implementation of the NSPL will depend on the collective commitment of all stakeholders within the public procurement ecosystem, including Procuring Entities, suppliers, oversight institutions, and regulatory authorities. Regular review and updating of the NSPL will be essential to ensure that prices remain responsive to prevailing market conditions, inflationary pressures, currency dynamics, and sector-specific developments. Continuous stakeholder engagement, data validation, and capacity building will therefore be critical to maintaining the credibility, relevance, and effectiveness of the Price List.

Ultimately, the NSPL is a strategic policy tool aimed at reinforcing fiscal discipline, enhancing public confidence in procurement processes, and safeguarding public funds. Its consistent and judicious application is expected to contribute significantly to improved procurement outcomes, reduced risks of waste and abuse, and strengthened compliance with the national legal and regulatory framework. In this context, the NSPL stands as an important milestone in Zimbabwe's ongoing efforts to modernise public procurement and promote sustainable, transparent, and value-driven public sector spending.

Dr. C. Ruswa

Chief Executive Officer

PROCUREMENT REGULATORY AUTHORITY OF ZIMBABWE.
